

This year we celebrate Blueridge General's 35th anniversary.

We started out small; performing repairs and renovations worth a few thousand dollars. From those days we have grown considerably – now performing multi-million dollar projects with values up to \$50 million each.

While our past is one to be proud of, we recognize that our continued success is dependent on the future and the manner in which we approach it. Blueridge is committed to diversifying our markets, developing new competitive deliverables, and further integrating technology into our every day operations.

Our primary market will always be the public sector, with educational facilities being our flagship projects. However, we have recently begun the pursuit of private sector opportunities as a compliment to those public projects that have defined us over the years.

To further develop those opportunities, Blueridge is proud to announce that we have teamed up with Varco Pruden Buildings to become Authorized VP Builders. As one of the leading metal building fabricators in the country, VP provides Blueridge with a competitive project deliverable that will benefit us in both the public and private sectors.

In addition to our expanded focus, we have more than tripled the presence of in-the-field technology on our sites and have provided our employees with multiple methods to remain connected on the go. We are becoming increasingly involved with the use of 3D modeling, and through our alignment with VP Buildings, we have the ability to design, model, and communicate these projects better than ever before.

We have accomplished a lot over the past 35 years and a big part of that success is due to our employees, our subcontractors and vendors, and our clients. We thank each of you for your contributions and support over the years and we look forward to the next 35 years together.

Best Regards,

Eric M. Stichler
President
